In school analysis of PP data:

- The narrowest PP gaps at the end of the year were in Year 6 in reading, writing and maths.
- The cohort with the widest gaps across all subjects is Year 4.
- The change to assessment does not allow for fine measures of progress, as children are assessed as working towards ARE, meeting ARE and working at greater depth within the ARE.
- There are positive gaps where PP children are performing better than non-PP children in reading (3G and 1H) and no gap in writing in 1H
